Sequence 10, Application US/08550715
Patent No. 5750345
FILING DATE: 10-JUN-1994
CLASSIFICATION:
INFORMATION FOR SEQ ID NO: 1:
SEQUENCE CHARACTERISTICS:
LENGTH: 1666 base pairs
TYPE: nucleic acid
STRANDEDNESS: 9ingle
TOPOLOGY: Innear
MOLECULE TYPE: DNA (genomic)
HYPOTHETICAL:
                                                                                                                                                                                                                                                                                                                               CELL TYPE: Beta-globin gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                APPLICANT: Wang, David G.
TITLE OF INVENTION: Identification and Mapping of Single Nuclectide
TITLE OF INVENTION: Polymorphisms in the Human Genome
FILE REFERENCE: 108827.129
CURRENT APPLICATION NUMBER: US/10/027,632

http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHWM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant of GilmmerH, see Mihaela Pertea http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant http://www.tigr.org/sefilab/glimmerm_htm/glimmerm.html, and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@figgr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/db/gli.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity, are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wushington.edu/RN/RepeatMasker (Arian Smit, http://ftp.genome.washington.edu/RN/RepeatMasker html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note="synony": F17K2.3; predicted by genscan"

An Arabidopsis full-length cDNA library was constructed essentially
as reported previously (Seki et al. (1998) plant J. 15707-703,
Seki et al. (2002) Science 296:141-1459. CDNA cleaved with BamHI
and XhoI was ligated to modified Lambda FLC-1-E vector (Carninci et
al. (2001) Genomics 77:79-90) digested with BamHI and SalI.

This clone is in a modified pluestript vector.

Please visit our web site (http://pfgweb.gsc.riken.go.jp/) for

further details.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /translation="Wesnhegnalqvidgvytyythisdpnpytypgmymkgedgyld

This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbark. The following quality assessment of this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent are splice axiants; including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the cotypes and therefore cleaminal end of the encoded protein. Please note that these cDNA sequences are derived from the Ms or Lack considered.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AARVPOLTRELGHKSDGETTRWILERAEPAITEATGTGTVPAIAVSVNGTLKIPTSSP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       315 GTTAGGTCACAAATCCGACGCGAAACGATTCGGTGGTTGTTGGAGAACGCTGAGCCGGC 374
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           may contain polymorphisms when compared to sequences from Col.0. Genest carried out the library production and sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the 5' sequences, selection of clones, and sequence assembly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 (bases 1 to 1156) ver, V., Troukhan, M., Alexandrov, N., Lu, Y.-P., Flavell, R. and

AT denotes an activation tag dissociation transposon within a single line, ET an enhancer trap dissociation transposon, MT a mis-expression enhancer trap dissociation transposon, MT a mis-expression enhancer trap dissociation transposon, MR a defective suppressor mutator transposon. J denotes a sequence derived from the 3'end of the transposon. E denotes a sequence derived from the 5'end of the transposon BESRC GARNet, ATIS project

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Arabidopsis

stress condition to which a plant cell has been exposed plants with increased tolerance to these abiotic stresses Identifying a and producing

Claim 144; SEQ ID NO 1034; 577pp + Sequence Listing; English.

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising:

(a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and

(b) detecting a profile of expressed polynucleotides in the plant characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an arbaidopsis thaliana stress regulated gene (ABZ12196-ABZ1754) used in methods of the invantion.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by

Novel Arabidopsis thaliana nucleic acid useful

```
transgenic plant with enhanced disease resistance and enhanced traits of interest, as probes, and in diagnosis and screening purposes
```

Claim 1; Page 158; 277pp; English.

The invention relates to Arabidopsis thaliana nucleic acid sequences. The DNA sequences and the polypeptides they encode are useful for identifying homologous or related genes, for producing compositions that medulate the expression or function of the polypeptides, for mapping functional regions of the protein, in diagnosis, for studying associated physiological pathways, for genetic manipulation of cells, preferably plant cells, in screening assays of various plant strains to determine the strains that are capable of withstanding a particular disease or biosynthetic products in plants and to create genetically modified and transgenic organisms, such as plant cells and plants. Transgenic plants are useful for introducing or improving disease resistance and stress tolerance in plants, screening biologically active agents, such as it fungicides and insecticides, and for identifying factors involved in plants, occurred to incorrete in plants, or and for identifying factors involved in plants of insertable to instruments. biosynthetic pathways of nutritional, commercial or medici. Sequences ABX60655-ABX61554 represent Arabidopsis thaliana polymucleotides of the invention
